

## Chloe's Story

Nine year-old Chloe was born with a fighter's spirit from the moment she came into this world (7 weeks early and weighing only 3 pounds). After just a few short months, Chloe's health took an alarming turn. That's when her parents learned of her Fanconi anemia diagnosis, a rare blood disorder that affects almost all organs of the body. Since then, she has endured what feels like endless numbers of tests and procedures. Most recently, she received a stem cell transplant to try and treat the symptoms of her critical illness. Despite the side effects and setbacks of her ongoing recovery, Chloe remains positive.

Beyond her medical journey, Chloe's heart remains captivated by the things she loves such as drawing, singing, dancing, building LEGO®, camping and cuddling with her dog. While Chloe was recovering, she and her family received the joyous news that she had the opportunity to have her most heartfelt wish come true. The prospect of a wish has become a source of strength and hope for Chloe during her toughest days. Chloe's mom, Shelly, shared "When Chloe found out she was eligible for a wish, it helped her push through her rough days knowing that soon she will get her wish."

While Chloe is still dreaming up her wish, her heart is filled with anticipation as her imagination takes her on endless adventures and possibilities of what she'll one day choose as her wish.

*Still wishing*
